

CAN SEAMING GAUGES

PLANER AND SHAPER PIN HEIGHT GAUGE

The Pin Height Gauge is commonly used in the initial setup of the seamer to ensure double seaming performance and air removal. All working surfaces are hardened and accurately ground.

The base measures 0.75" wide x 5.25" long (19mm x 130mm). Includes a 3" extension providing a range of 9.25" (230mm).

Supplied in a wooden case for transport and storage.

COUNTERSINK DEPTH GAUGE

Provide accurate measurements from the top of the double seam to the bottom of the countersink adjacent to the chuck wall.

Gauges for beverage cans are 4" long and use a carbide tip with a .015" radius. Gauges for sanitary cans are 7" long, and use a .030" radius carbide tip. Countersink gauges can be equipped with either a 2" diameter Inch dial indicator which reads to .001", a 2" diameter Metric dial indicator which reads to .01mm, or a digital indicator which is switchable between inch/mm, and reads to .0001"/.001mm.

The digital indicator has an SPC output for connection to automated seam analysis systems. All countersink gauges are supplied in a foam lined plastic case.

SMALL HAND TOOLS

CAN SEAM MICROMETERS

Specifically designed to measure seam thickness and seam height. Range is 0 to 0.375" (0 to 9.0mm for metric micrometers). Graduated in .001" (.01mm) with ratchet stop to prevent false readings from overtightening. The snub-nosed micrometers are designed for necked-in beverage cans and aerosol cans.

Cat. No.	Description
10770-00	Can Seam Micrometer, inch, for sanitary cans
10770-01	Can Seam Micrometer, metric, for sanitary cans
10770-05	Snub-nosed Can Seam Micrometer, inch, for beverage and aerosol cans
10770-06	Snub-nosed Can Seam Micrometer, metric, for beverage and aerosol cans

NIPPERS

A convenient, all-purpose hand tool used for hand teardown of can seams. Vinyl coated hand grips, jaw width is 1", overall length is 6".

Cat. No.	Description
10771-00	Nippers
